

Hyperkalemia is a potentially life-threatening complication including heart transplantation, in fact, it is well studied and managed in most cases, authors review it for heart transplantation and address it, it is good for clinicians. But for a review, it seems a little concise.

Response: Thank you very much for taking the time to review our article.

According to me authors correctly perform this mini-review article.

Response: Thank you very much for taking the time to review our article.

Issues raised: (1) The authors did not provide original pictures. Please provide the original figure documents.

Response: Thank you very much for taking the time to review our manuscript. The figure has been resubmitted in the appropriate powerpoint format.
