**Evolving therapies in advanced oesophago-gastric cancers ...**<https://pubmed.ncbi.nlm.nih.gov/33349073>

Evolving therapies in advanced oesophago-gastric cancers and the increasing role of immunotherapy. Recent advances in the treatment of chemo-refractory esophagogastric cancer add to the improving survival of patients with this disease. Further research is needed to improve patient selection to therapies and the earlier incorporation of these agents in the treatment journey.

The CheckMate 649 trial (1) evaluated nivolumab plus chemotherapy versus chemotherapy alone as first-line treatment in patients with non-HER-2-positive advanced gastric cancer, gastro-oesophageal junction cancer, or oesophageal cancer – all with adenocarcinoma histology. The results show that nivolumab and chemotherapy improved overall survival and progression-free survival in patients with PD-L1 combined positive score (CPS) >5 tumours. Improvements were also observed in patients with PD-L...
