**Abstract**

**BACKGROUND**

Pancreatic endotherapy provides treatment options for the management of chronic pancreatitis-related structural complications such as pancreatic duct stones, strictures, and pancreatic fluid collections. Most studies detailing endotherapy, however, have focused on technical success outcomes such as stone clearance or stricture resolution.

## Managing chronic pancreatitis: the view from medical ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6119646>

The prevailing perception—that most **chronic pancreatitis patients** (CP) are alcoholics, have **chronic** pain, are narcotic seeking; and, there is little to offer to them in terms of treatment is incorrect. CP is a complex disease caused not solely from heavy alcohol consumption; and, it has highly variable clinical symptomatology and disease course.
