Manuscript Type: CASE REPORT

Intestinal gangrene secondary to congenital transmesenteric hernia in children misdiagnosed with gastrointestinal bleeding: A case report

Congenital transmesenteric hernia

Abstract

BACKGROUND

Congenital transmesenteric hernia in children is a rare and potentially fatal form of internal abdominal hernia, and no specific clinical symptoms can be observed preoperatively. Therefore, this condition is not widely known among clinicians, and it is easily misdiagnosed, resulting in disastrous effects.

CASE SUMMARY

This report presents the case of a 12-year-old boy with the chief complaint of abdominal
