

Inpatient Healthcare Trends Among Adult Cystic Fibrosis ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3805019>

The Cystic Fibrosis Foundation recommends "care for adults delivered in inpatient and outpatient facilities that are appropriate for adults with laboratory services as outlined in Clinical Practice Guidelines." 2 Three general models of care for adult CF patients exist in today's clinical setting. Some adult CF centers are located in ...

Inpatient healthcare trends among adult cystic fibrosis ...

<https://pubmed.ncbi.nlm.nih.gov/21901854>

Background: Adult cystic fibrosis (CF) patients are an expanding cohort that is taken care of in a variety of hospital settings including adult centers located within pediatric institutions. This study compared costs and discharge rates among adult CF patient hospitalizations in terms of location of hospitalization.

Inpatient health care use among adult survivors of chronic ...
<https://pubmed.ncbi.nlm.nih.gov/17018465>
Main outcome measures: Length of stay and total charges among pediatric, adult, and mixed hospitals. Results: In multivariate adjusted analyses, patients with complex congenital heart disease and cystic fibrosis had a significantly longer length of stay in pediatric hospitals than in adult or mixed hospitals (P<.001); no similar difference was ...

Disparities in Mortality of Hispanic Patients with Cystic ...
<https://pubmed.ncbi.nlm.nih.gov/29742360>
Rationale: Patients of Hispanic origin with cystic fibrosis (CF) are the largest growing minority, representing 8.5% of patients with CF in the United States. No national survival analysis of this group has ever been undertaken. Objectives: We aimed to determine whether Hispanic ethnicity within the CF population is associated with worse outcomes and whether any geographic differences exist.
