## Hepatocellular Carcinoma

Medical Condition

The most common form of liver cancer often seen in people with chronic liver diseases like cirrhosis.

Rare (Fewer than 200,000 cases per year in US)

May be preventable by vaccine

Often requires lab test or imaging

Treatable by a medical professional

Can last several months or years

It is caused mainly due to the chronic infection of the liver or DNA mutation of the liver cells. It is characterized by unexplained weight loss, upper abdominal pain and yellowing of the skin. Treatment options include hepatectomy, target drug delivery and the use of radiation to kill the cancerous cells.

### Symptoms

The early stages of the disease do not present any symptoms but in the later stages the symptoms which are noted are as follows:

- Upper abdominal pain
- Weight loss
- Jaundice

Systemic Therapy for Advanced Hepatocellular Carcinoma ...

<https://www.targetedonc.com/view/systemic-therapy...>

First-Line TherapySecond-Line TherapyA Multidisciplinary Approach

Most patients with advanced HCC may be given the combination of **atezolizumab** and **bevacizumab** upfront if they have Child-Pugh class A liver disease and an ECOG performance status of 0 to 1. In addition, this regimen may be offered following management of esophageal varices, when present, according to the ASCO guidelines.2
