SPECIFIC COMMENTS TO AUTHORS

The problem of visceral hypersensitivity occurs in irritable bowel syndrome, particularly in women has been discussed for several years (including the authors of the current publication). In the literature there are quite a lot of works that discuss of various aspects of this condition. The present publication is a continuation of previous research. The topics are covered very well and thoroughly and literature citations are appropriate. The paper is organized in a clear and easy to understand manner. However, the literature cited is too numerous, especially in the introduction and authors should consider the desirability of citing all papers. The Discussion section reiterate some information already presented whereas one would expect a personal interpretation of the results and some suggestions to move forward. Some of the information from discussion should be included in the introduction of the paper. To sum up, the work provides novel information and deserves publishing after minor essential improvements.
