## COVID-19 and the liver

<https://pubmed.ncbi.nlm.nih.gov/32553666>

In the current pandemic, **hepatic dysfunction** has been seen in 14-53% of patients with COVID-19, particularly in those with severe disease. Cases of acute liver injury have been reported and are associated with higher mortality. Hepatic involvement in COVID-19 could be related to the direct cytopathic effect of the virus, an uncontrolled immune reaction, sepsis or drug-induced liver injury.

## Coronavirus Disease (COVID-19) in Kidney and Liver ...

<https://pubmed.ncbi.nlm.nih.gov/32519617>

Here, we aimed to determine the frequency of COVID-19 in our kidney and **liver transplant** patients. Materials and methods: Our study included 583 **transplant** patients who were admitted to our outpatient transplant clinics and emergency departments between March 1 and May 1, 2020. Seventy-four of them were liver transplant recipients (46 male, 28 female, of which 14 were pediatric and 60 were adult ...

## COVID-19 pandemic: Its impact on liver disease and liver ...

<https://pubmed.ncbi.nlm.nih.gov/32587443>

The priorities of many institutions have changed to manage critically ill **corona virus infectious disease-2019** (COVID-19) patients, which affected the working style of many departments. Hepatologists and **transplant** surgeons look after a very sensitive patient group. Patients with **liver disease** need special attention and continuous follow-up.

## COVID-19 & Liver Disease | Patient Care

<https://weillcornell.org/news/covid-19-liver-disease> ▾

Nov 04, 2020 · We've created new policies for COVID-19 testing in both donors and recipients for **liver transplant**. But we are still evaluating patients for transplant, treating patients on the transplant wait list, and performing transplants. Once a patient is clear of the virus, COVID-19 itself should not be a contraindication to transplant.

## COVID-19 and the liver

<https://pubmed.ncbi.nlm.nih.gov/32553666>

In the current pandemic, hepatic dysfunction has been seen in 14-53% of patients with COVID-19, particularly in those with severe **disease**. Cases of acute **liver** injury have been reported and are associated with higher mortality. Hepatic involvement in COVID-19 could be related to the direct cytopathic effect of the virus, an uncontrolled immune reaction, sepsis or drug-induced **liver** injury.
