Gastrinoma and the Zollinger-Ellison Syndrome – All You ...

<https://thehealthyville.com/health/gastrinoma>

Zollinger-Ellison syndrome is a condition in which one or more tumors form in the pancreas or duodenum, which is the upper part of the small intestine. These tumors are called **gastrinoma**. The **gastrinoma** secretes a hormone called **gastrin** in large amounts. This leads to the stomach producing more acid than normal.

Zollinger-Ellison syndrome (gastrinoma): Clinical ...

<https://www.uptodate.com/contents/zollinger-ellison...>

Apr 20, 2020 · Zollinger-Ellison (ZES) syndrome is characterized by gastric acid hypersecretion resulting in severe acid-related peptic disease and diarrhea [1,2]. The clinical manifestations and diagnosis of ZES will be reviewed here. The management of ZES is discussed separately. (See "Management and prognosis of the Zollinger-Ellison syndrome (gastrinoma)" .)

Zollinger Ellison Syndrome

Medical Condition

A condition where the body produces an excess of the gastrin hormone.

📊

Extremely rare (Fewer than 1,000 cases per year in US)

🏥

Requires lab test or imaging

👨‍⚕️

Treatment from medical professional advised

🕒

Can last several months or years

The exact cause is unknown, but the condition develops with tumors called gastrinomas which are found at the head of the pancreas and upper small intestine. Some of the symptoms include abdominal pain, weight loss, nausea and vomiting, loss of appetite, bloating, burping and diarrhea. The methods of managing this disease include medication and surgery.

Symptoms

Symptoms can include:

• Nausea

• Vomiting

• Abdominal pain

• Diarrhea

• Weight loss

• Loss of appetite

Gastrinoma and Zollinger Ellison syndrome: A roadmap for the management between new and old therapies

Controversies regarding gastrinoma and Zollinger Ellison syndrome

Abstract

Zollinger-Ellison (ZES) syndrome associated with pancreatic or duodenal gastrinoma is characterized by gastric acid hypersecretion, which typically leads to gastroesophageal reflux disease, recurrent peptic ulcers, and chronic diarrhea. As symptoms of ZES are nonspecific and overlap with other gastrointestinal disorders, the diagnosis is often delayed with an average time between the onset of symptoms and final diagnosis longer than 5 years. The critical step for the diagnosis of ZES is represented by the
