Evidence based tools to improve efficiency of currently administered oncotherapies for tumors of the hepatopancreatobiliary system

Herold Z *et al.* Hyperthermia in hepatopancreatobiliary cancers

Zoltan Herold, A Marcell Szasz, Magdolna Dank

Abstract

Hepatopancreatobiliary tumors are challenging to treat and the advanced or metastatic forms have a very low 5-year survival rate. Several drug combinations have been tested and newer therapeutic approaches have also been introduced in the last decades, including radiofrequency and heat based methods. Hyperthermia is the artificial heating of tumors *via* various biophysical methods, which may possess
