SPECIFIC COMMENTS TO AUTHORS

This is a very valuable article. There are few published data on long-term outcome of pancreatic function and growth after pediatric pancreatic surgeries. The results presented in this paper are helpful for the reader to conduct better follow-up management of postoperative patients. Compared with other similar articles, the number of cases were small. As a reviewer, I have the following suggestions: 1. In key words, "prognosis" should be deleted; 2. In core tip, line 42, "pancreatic cancer" did not apply to this article; 3. The authors noted that PPPD might worsen the pancreatic function. Did the "PD" in Table 2 and 4 include PPPD? 4. Vitamin D was an important result in this article, should be added in Table 2;
