SPECIFIC COMMENTS TO AUTHORS

This paper concerns a very important and current problem. There is not much literature on this matter, hence this article is extremely important. However, I have some comments. 1. In the subsection Viral hepatitis the sentence „In those cases prophylaxis may be indicated. „ It requires an explanation what kind of prophylaxis should be considered. 2. The paper is massy and touches too many fields, hence they are not carefully discussed. The content is delivered chaotically. 3. The section of Upper part of GI and COVID-19 should be separated, as IBD and COVID -19 and pancreas and COVID -19 are. 4. The section concerns procedures in gastroenterology in COVID-19 era should be rewritten. The information on which procedures should be performed and when during this time and which can be postponed have to be described. 5. The section Gastroenterological cancer should present wider information on the approach to the patient with suspected neoplasm process of alimentary tract. The information that concerns pathophysiology and ACE2 should be moved to the section Introduction.
