**Novel technique of extracorporeal intrauterine morcellation after total laparoscopic hysterectomy: Three emblematic case reports**

Antonio Macciò, Elisabetta Sanna, Fabrizio Lavra, Piergiorgio Calò, Clelia Madeddu

### Abstract

#### BACKGROUND

In the presence of a large uterus, total laparoscopic hysterectomy (TLH), always requires morcellation to allow removal of the tissues from the abdominal cavity.

A novel technique of extracorporeal intrauterine morcellation using

## Leiomyosarcoma after Total Laparoscopic Hysterectomy with ...

<https://www.hindawi.com/journals/crig/2019/9381230> ▾**Abstract**

Introduction

Case Report

Discussion

Conclusion

Introduction. **Power morcellation** is an effective and minimally invasive technique used to remove specimen tissues or the uterus in total laparoscopic hysterectomy (TLH). However, it has the risk of intraperitoneal dissemination of tissue and can cause a parasitic myoma. We report a case of leiomyosarcoma that occurred 4 years after TLH with **power morcellation** for fibroids. Case. A 52-year-old woman was referred to our hospital with a pelvic mass. She was diagnosed to have submucosal fibroid...
