Atypical femoral fractures and current management

<https://pubmed.ncbi.nlm.nih.gov/30035084>

Atypical femoral fractures and current management. With the rapid increase in patients receiving bisphosphonates (BPs) for treating osteoporosis, one of the clinical complications associated with its long-term use is atypical femoral fractures (AFFs). Although the absolute risk for AFFs is low and it was a consensus that AFFs were acceptable compare ....

Management of atypical femoral fracture: a scoping review ...

<https://pubmed.ncbi.nlm.nih.gov/27215872>

Abstract Background: Atypical femoral fractures (AFF) are a rare type of femoral stress fracture recently described, potentially associated with prolonged bisphosphonate therapy. Evidence-based recommendations regarding diagnosis and management of these fractures are scarce.
