#### **SPECIFIC COMMENTS TO AUTHORS**

As the authors mentioned in the manuscript, because of the huge heterogeneity of the included studies in this systematic review and meta-analysis, it puts high demands on the interpretation of the results. However, it can be seen that the authors have done a lot of work, and the results obtained seem to have a certain enlightenment for the clinical treatment of CP patients. The research theme of the manuscript is relatively novel, the method is correct, the writing logic is fluent, and it follows the standard framework of systematic review research. Therefore, I think this manuscript can be accepted and published on WJG.
