

Answering reviewers:

Thank you for your recommendation, we have updated some references according to the request and made a small modification to the original manuscript, including:

- 1.The expression of PD-L1 on cancer cells is the premise of establishing therapy, if PD-L1 wasn't highly expressed on malignant cells, the use of PD-L1 should be avoided in order to prevent the occurrence of AKI[136].
- 2.In a word, renal biopsy is always the gold standard for the diagnosis of drug-related AKI [146].
