SPECIFIC COMMENTS TO AUTHORS

The case report described a tongue schwannoma in an 8-year boy. The symptoms, diagnostic modalities, surgical procedure, pathologic description, and follow-up data for the tongue schwannoma was well presented. The differential diagnoses and intraoperative tips were also discussed. However, many previous case reports have described the disease. The novelty is low. The significance to clinical practise is doubted due to the lack of preoperative diagnosis modality. Surgical resection is the first choice for tongue masess whatever the final pathological diagnosis is. Overall, this was a good rare case for the readers of this journal.
