Transmission

Symptoms

Diagnosis

Hepatitis E infection is found worldwide. Two different patterns are observed, where hepatitis E is found in: 1. resource-poor areas with frequent water contamination; and 2. areas with safe drinking water supplies. The disease is common in low- and middle-income countries with limited access to essential water, sanitation, hygiene and health services. In these areas, the disease occurs both as outbreaks and as sporadic cases. The outbreaks usually follow periods of fecal contamination of dri...

Hepatitis E

Hepatitis E is inflammation of the liver caused by infection with the hepatitis E virus; it is a type of viral hepatitis. Hepatitis E has mainly a fecal-oral transmission route that is similar to hepatitis A, although the viruses are unrelated. In retrospect, the earliest known epidemic of hepatitis E occurred in 1955 in New Delhi, but the virus was not isolated until 1983 by Russian scientists investigating an outbreak in Afghanistan. HEV is a positive-sense, single-stranded, nonenveloped, RNA icosahedral virus and one of five known human hepatitis viruses: A, B, C, D, and E.
