#### **SPECIFIC COMMENTS TO AUTHORS**

This manuscript is a review. So it does not fit all of the criteria checklist. In my opinion, it is still a high quality manuscript for focusing in the field of difficult common bile duct stones. The authors reviewed the latest and most important researches in this area. The authors stated that while treating difficult CBD stones, traditional ERCP procedure, ESWL, EUS, and lithotripsy, even surgical treatments are all important. The availability of experienced operator and resources needs to be considered in creating individualized treatment strategies for managing difficult biliary stones.
