## PEER-REVIEW REPORT

Name of journal: World Journal of Gastrointestinal Oncology

Manuscript NO: 66189

Title: Exosomes as Potential Diagnosis and Treatment for Liver Cancer

Reviewer's code: 03769068 Position: Editorial Board Academic degree: PhD

Professional title: Adjunct Professor, Professor

Reviewer's Country/Territory: Brazil

Author's Country/Territory: China

Manuscript submission date: 2021-03-22

Reviewer chosen by: AI Technique

Reviewer accepted review: 2021-03-22 14:36

Reviewer performed review: 2021-03-29 11:50

Review time: 6 Days and 21 Hours

Scientific quality	[ ] Grade A: Excellent [ ] Grade B: Very good [Y] Grade C: Good [ ] Grade D: Fair [ ] Grade E: Do not publish
Language quality	[ ] Grade A: Priority publishing [ Y] Grade B: Minor language polishing [ ] Grade C: A great deal of language polishing [ ] Grade D: Rejection
Conclusion	[ ] Accept (High priority) [ ] Accept (General priority) [ ] Minor revision [ Y] Major revision [ ] Rejection
Re-review	[Y]Yes [ ]No
Peer-reviewer statements	Peer-Review: [Y] Anonymous [ ] Onymous  Conflicts-of-Interest: [ ] Yes [Y] No

## SPECIFIC COMMENTS TO AUTHORS

The present article presented by the authors, introduces citing liver cancer and as the greatest adversities faced in the late diagnosis and as consequences for the patients' lives, since most of the conclusive diagnoses for cancer it presents in the middle or late stage. In the text, more precisely in the abstract, the authors exhaustively cite the terms "exosomes", removing the necessary cohesion that is necessary to compose the summary of the article, and it is advisable to explain about the content of the study in a simple and direct way in order to attract attention of the reader. In the passage "Liver cancer is the third most significant cause of cancer death in the world" present in the summary, it is again important to seek concrete information and / or reference the data reported and related to the World Health Organization. American Health (PAHO) in conjunction with the World Health Organization (WHO) published in September 2018 and updated in October 2020, liver cancer is the fourth most significant cause of cancer-related death. In the methodology, it was less cited from the literature sources used to carry out the research as well as from the applied techniques, it was widely cited about the therapeutic effect and mechanism of exosomes in liver cancer. The methodology relies on the precise description of the methods used in a very complete way, even though there are few clinical studies and publications. The authors conclude the work by explaining the advantages of working with suitable biomarkers in the fight to treat diseases, making it an interesting work to read. Finally, the work presents structure, font size, the font used and its appropriate formatting.
