ABSTRACT Introduction Report Discussion Conclusions

Among the medical complications of long-lasting **Peritoneal Dialysis** (PD) a particular pathology has been observed, the so-called Encapsulating Peritoneal Sclerosis (EPS). The main properties of the pathological process of EPS is represented by proliferative fibrosis and sclerosis of the peritoneum, which lead to the formation of the typical "cocoon" and obstruction. Since glucose, Advanced Glycation End products (AGEs), and Glucose Degr...

EPS in a AMA-M2 positive patient

Min-Yue Yin, Li-Juan Qian, Li-Ting Xi, Yi-Xing Yu, Yu-Qi Shi, Lu Liu, Chun-Fang Xu

**Abstract**

**BACKGROUND**

Encapsulating peritoneal sclerosis (EPS) is hard to diagnose because of nonspecific symptoms and signs. It is a general consensus that EPS is classified as primary and secondary. There have been several studies discovering some high-risk factors such as liver cirrhosis, of which AMA-M2 is a biomarker, and intra-abdominal surgery such as
