Fully covered metal biliary stents: A review of the literature

Robert Lam, Thiruvengadam Muniraj

Abstract

Fully covered self-expandable metal stents (FCSEMS) represent the latest advancement of metal biliary stents used to endoscopically treat a variety of obstructive biliary pathology. A large stent diameter and synthetic covering over the tubular mesh prolong

Post-sphincterotomy bleeding: fully-covered metal stents ...

<https://pubmed.ncbi.nlm.nih.gov/24555084>

Recently, the temporary placement of **fully-covered metal stents (FCMS)** into the **biliary tree** in order to achieve a tamponade effect has been described as an additional therapeutic option for PSB. The aim of this article is to **review** the **literature** on **FCMS** for hemostasis in **PSB** and update the treatment algorithm for this complication.
