SPECIFIC COMMENTS TO AUTHORS

This is an excellent case report with interesting imaging. This reviewer has two requests. 1) Patient was diagnosed in 2017. Now 4 years later in 2021, what is her current status? Other breast disease? 2) There are some hints that the absence of androgen receptor in adenoid cystic carcinoma might be a factor of poor prognosis. Yigit et al (2020, Androgen Receptor Expression in Adenoid Cystic Carcinoma of Breast: A Subset of Seven Cases) reported frequent expression of the AR in 6 of 7 patients. What was the status of the androgen receptor in the present case?
