

**Free musculocutaneous flap transfer for refractory chronic ...**<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6051821>

However, in our case, free musculocutaneous flap transfer is probably the last treatment option because his great omentum and the local flaps had been used previously and a large autologous tissue will be required to obliterate the empyema cavity (8-10). We harvested a free vastus lateralis musculocutaneous flap from his left thigh to ...
