Respected Sir/Madam

Reference#: 66743

Title: Dengue hemorrhagic fever and cardiac involvement

I am hereby giving point response to your comments;

Reviewer #1

Comment #1: The manuscript is not concise enough, such as Introduction section, and Incidence and clinical manifestation section.

Author answer: I already added more details in introduction section and incidence and clinical manifestation section.

Comment #2: There were so many spelling mistakes in the manuscript that it was difficult to read and understand.

Author answer: I already submitted the manuscript to be edited by [Filipodia: Science Management & Communication Experts](#) and already received the English Language Certificate.

Comment #3: If authors could characterize the myocardial involvement of Dengue and the common viral infection, the manuscript would be distinctive.

Author answer: I already added the common viral infection that effect the heart in text, 1 more table, and 1 more figure.

Best regards,

Assoc.Prof.Wattana Leowattana
