Sepsis

Medical Condition

Fast heart rate and difficulty in breathing

The illustration shows a patient lying in a hospital bed, connected to a heart rate monitor. To the right, a circular inset shows a cross-section of a blood vessel. Inside the vessel, there is a cluster of red dots representing bacteria, labeled 'Bacterial infection'. The vessel itself is labeled 'Blood vessel'.

An infection of the blood stream resulting in a cluster of symptoms such as drop in a blood pressure, increase in heart rate and fever.

Successful treatment of gastrointestinal infection-induced septic shock using the oXiris® hemofilter: A case report

oXiris® hemofilter for treatment of septic AKI

Abstract

BACKGROUND

Septic shock leads to multiple organ failure, and bacterial endotoxins and endogenous cytokines play essential roles in the pathogenesis. The oXiris® hemofilter can efficiently adsorb endotoxins and cytokines.

CASE SUMMARY

We admitted a critically ill 59-year-old male patient with gastrointestinal septic shock.

Jul 18, 2016 · The concept of CAH and treatment based on this concept has been investigated mainly in Japan by using a PMMA hemofilter. Accordingly, the Japanese Guidelines for the management of sepsis [] include a weak recommendation for CHDF for mediator removal, with a comment that there is a possibility to improve hemodynamics, though without sufficient evidence supporting improving outcome.
