[PDF] Breast Cancer Facts & Figures 2019-2020

<https://www.cancer.org/.../breast-cancer-facts-and-figures-2019-2020.pdf>

Breast cancer typically has no symptoms when **the tumor** is small and most easily treated, which is why screening is important for early detection. The most common physical sign is a painless lump. Sometimes **breast cancer** spreads to underarm lymph nodes and causes a lump or swelling, even before **the** original **breast tumor** is large enough to be felt.

< **1 – What Was The Stage of You...** 2 – What Was The Grade of You... 3 – Was Your >

The stage of breast cancer refers to how advanced your cancer is in terms of its ability to spread throughout your body. It is determined based on the **size of the tumour, the number of lymph nodes affected**, whether it has invaded the surrounding tissue, and if it has spread to other parts of the body. Breast cancer can be staged from 0 to 4, with various sub-stages in between. Breast cancer stage can help your doctor determine your prognosis. Although it tends to be the factor that is most discussed an...

Patients' awareness about their own breast cancer characteristics

Patients' awareness & breast cancer characteristics

Abstract

BACKGROUND

Patients' knowledge about the characteristics of their own cancer could be important factor for understanding treatment regimens and adhering to therapies. However, to date nothing is known about Chinese breast cancer patients who are aware of the characteristics of their own tumors.

Clinical characteristics of breast cancer patients with ...

<https://www.sciencedirect.com/science/article/abs/pii/S0960977617305714>

Patients' clinicopathological information was compared with a control group of 727 breast-cancer patients without mental disorders seen during the same period. Results Patients with mental disorders were less likely to be aware of their own breast cancer; the lesions were often found by other people such as family, care staff, and medical staff.
