Burning mouth syndrome responsive to pramipexol

<https://pubmed.ncbi.nlm.nih.gov/18219443>

Abstract. **Burning mouth syndrome** (BMS) is characterized by **burning** discomfort or pain in otherwise normal oral mucosa. It is usually refractory. Treatment modalities are scarce. Herein we **report** one **case** of primary disabling BMS, previously refractory to multiple regimens, with complete and persistent improvement with pramipexol, a nonergot **dopamine agonist** which has high selectivity for dopaminergic D2 receptors.
