SPECIFIC COMMENTS TO AUTHORS

This is a case of magnet retention in the ileum. In the case of no magnet entering the abdominal cavity, colonoscopy should enter the end of the ileum during colonoscopy. Maybe the magnet can be found and the foreign matter can be removed directly under the endoscope, so as to avoid the risk of laparoscopic exploration.

SPECIFIC COMMENTS TO AUTHORS

Well written manuscript. In case description, anaesthetic technique should be mentioned. In discussion, emphasis should also be given to prevention of such injuries in children and alternative modes of treatment and their limitations.
