<https://www.sciencedirect.com/science/article/pii/S0895796718300449>

Jun 01, 2018 · Jun 01, 2018 · Abstract. **After** the invention of the balloon catheter by Fogarty in 1963, surgical thromboembolectomy was considered the gold standard treatment for many years in patients with **acute lower** limb ischemia (ALLI). ALLI is a dramatic event, carrying a high risk of amputation and perioperative morbidity and mortality.

Radial neuropathy following arterial line removal: A rare ...

<https://europepmc.org/abstract/MED/29511544>

Feb 27, 2018 · Feb 27, 2018 · Radial artery **thrombosis** is a rare complication of cannulation. There are no reported cases of **acute thrombosis** and severe **acute** neuropathy in the setting of cannula discontinuation. We **report a case of acute** radial nerve mono-neuropathy following **thrombosis after** radial **arterial line removal**.

Acute lower extremity arterial thrombosis after intraocular foreign body removal under general anesthesia: A case report and review of literature

Jeon S *et al.* Arterial thrombosis during ophthalmic surgery

Abstract

BACKGROUND

Surgery, which is a major risk factor for venous thrombosis, has rarely been considered a risk factor for arterial thrombosis. Recent studies have suggested that venous and arterial thromboses share common risk factors and have a bidirectional relationship. Accordingly, there is a growing interest in the risk of arterial thrombosis after surgery. We report a case of acute bilateral lower extremity arterial thromboses that developed

<https://www.sciencedirect.com/science/article/pii/S0895796718300449>

Jun 01, 2018 · 1. Introduction1.1. Epidemiology. Acute lower limb ischemia (ALLI) is defined as any sudden decrease in limb perfusion causing a potential threat to limb viability in patients who present within 2 weeks of the acute event .The incidence of this condition is approximately 15 cases per 100.000 persons per year .The prevalence is <0.1% in general population and about 5% to 10% in patients ...

Lower Extremity Amputation - StatPearls - NCBI Bookshelf

<https://www.ncbi.nlm.nih.gov/books/NBK546594/?report=reader>

The use of general anesthesia (GA) versus regional anesthesia (RA) for performing major lower extremity amputation is an area of ongoing debate. There is literature to support the use of RA for major lower extremity amputation with decreased blood loss, need for transfusion, postoperative pain medication, and faster time to oral intake when ...
