2	<p><i>Editorial Office's Comments</i></p> <p>Science Editor: General Information of the Manuscript Name of journal: World Journal of Stem Cells Manuscript NO.: 67752 Title: Therapeutic effect of two promising types of mesenchymal stem cells in mouse models of STZ-induced type 1 diabetes Authors: Yu-liang Sun, Ling-rui Shang, Rui-hong Liu, Xin-yi Li, Sheng-hui Zhang, Ya-kun Ren, Kang fu, Hong-bin Cheng, Yahaya B, Yan-li Liu, Jun-tang Lin Academic Editor code: 05823102 Academic Editor Country: Egypt Science Editor: Recommend for potential acceptance. 1) Scientific quality: The manuscript is a basic study of therapeutic effect of two promising types of mesenchymal stem cells in mouse models of STZ-induced type 1 diabetes: The topic is within the scope of the WJSC. (1) Classification: Grade B; (2) Summary of the Peer-Review Report: The authors show that MenSC are able to promote pancreas regeneration and angiogenesis, reduce inflammation, improve glycogen synthesis, and increase area of white pulp in spleens of STZ-induced type 1 diabetes mice, to the same degree as UCMSC. This is an interesting paper, using a novel source of stem cells that may become an effective treatment for T1D. However, the quality of the manuscript can be improved if the authors considered and addressed the following concerns: 1. change the title to "Therapeutic effects of menstrual blood-derived endometrial stem</p>	[Y]

cells in mouse models of STZ-induced type 1 diabetes” in order to place the focus on MenSC, since that is the new type of SC being tested. 2) rephrase the parts where you say that MenSC and UCMSC help improve type 1 diabetes to instead place the focus on the therapeutic ability of MenSC as compared to UMSC, as information is already known about UCMSC. 3) Subheadings for the results section need to be improved and made more detailed. For the third subheading, only inflammation is mentioned, but the figures discussed here also show data about anti-apoptosis and angiogenesis, so this should be added to the subheading. The last three subheadings all say “morphology” and/or “function.” Try to be more specific using the results to come up with better subheadings. 3. The introduction section lacks crucial information. First, information about the usage of UCMSC in the clinic must be added. How/where are they being transplanted? Specifically what improvements do patients see? Merely stating that their usage is limited is not sufficient. Furthermore, it is crucial to differentiate between T1D and T2D, and it is unclear whether MENSC are to be used for one or both. In addition, information about the STZ model is required. 4. The figures need a lot of improvement. In Figure 1, the labels (letters) do not match the letters in the legend or in the text. Where image 1F, 1G? In Fig. 1A, it needs to be clearly stated what * and # refer to. Most of the images (1D, 1E, 4A, 5C) need better labeling. For example, in 1E and 4A, what is shown in the top row and the bottom row? In 1D and 5C, what is shown in the left

column and the right column? You should indicate it in the figure legend and also can add the labels to your figures. Also, utilize arrows to label these images. For example, in 1D, point to the islets. Figure 1G needs a better label for the y axis: I would suggest “%CD31+.” Overall, your legends can be more detailed. Minor points

1. In the text description about Fig 1A, the authors mention day 43, but in the graph, it appears that it is actually day 42. In Figure 1, what is the significance of increased body weight or food consumption? The text mentions that serum insulin levels were upregulated and it references Fig 1D, E, F, but none of those figures show insulin. Actually, figure 2C is about plasma insulin and that is not even mentioned in the text. I think the insulin figure should be part of Fig 1 not Fig 2. In Fig 1, CD31 is mentioned, but the significance of this marker is never stated.
- (3) Format: There are 5 figures, no tables; Thirteen references were cited, including sixteen references published in the last three years. 1 self-citation.
- 2 Language evaluation: B. Language editing certificate was provided by AJE.
- 3 Academic norms and rules: The authors provided biostatistics review certificate. The authors signed the conflict-of-interest disclosure form and copyright license agreement. The institutional review board approval form was uploaded. The written informed consent was waived. No academic misconduct was found in the Cross Check investigation and the Bing search.
- 4 Supplementary comments: (1) Invited manuscript. (2) Supported by Henan Province Foundation of China,

	<p>NO.202300410307 and NO.212102310611; Xinxiang City Foundation of China, NO.GG2020009. /No financial support was obtained for the study.)The topic has not previously been published in the WJSC.</p> <p>5 Issues raised: 1) Within the abstract please, minimize the abbreviation- 2) Mention full word for the abbreviation when first time you were writing. 3) Resolve UCMSC. 4) Should TNFα be TNFα? 4) Delete core tip. 5) In methods, moving the sentence about insulin ELISA to biochemical assays. 6) In HE staining: remove (as described before) and put the reference. 7) In Result: Repeating the STZ- and measurement procedures at the beginning of Result is unnecessary. 8) Figure 2E-F, please correct TNFα and IFNγ to TNFα and IFNγ, respectively. 9) Was IL-6 and VEGF of control mice measured? Elevated levels of both of these cytokines are associated with several diseases (diabetes, various autoimmune diseases and cancers, etc.). Authors also discussed that “a low dose of IL-6 can counteract the cytotoxicity of IL-1β”, furthermore, the elevation of these markers are usually bad prognostic signs in every conditions. What do authors think, what could be the source of these elevated levels? 10) Write <i>in vivo</i> or <i>in vitro</i> italic 11) PMID and DOI numbers are missing in the reference list. Please provide the PubMed numbers and DOI citation numbers to the reference list and list all authors of the references. Please revise throughout; 6 Re-Review: required; 7 Recommendation: acceptance</p> <p>Company Editor-in-Chief: I have reviewed the Peer-Review Report, full text of the manuscript, and the relevant ethics</p>	
--	--	--

	documents, all of which have met the basic publishing requirements of the World Journal of Stem Cells, and the manuscript is conditionally accepted. I have sent the manuscript to the author(s) for its revision according to the Peer-Review Report, Editorial Office's comments and the Criteria for Manuscript Revision by Authors.	
3	The fixed headings are copied.	[Y]
4	The title concisely summarizes the main topic of the study and is not too long (no more than 18 words). Words such as 'exploration', 'research', 'analysis', 'observation', and 'investigation' are avoided. The title does not start with 'The' and does not include any Arabic numbers or uncommon abbreviations.	[Y]
5	A short running title is provided (no more than 6 words).	[Y]
6	The authors' full family (sur)names and full/abbreviated first names are listed on the title page and are consistent with those listed in the signed BPG Copyright License Agreement form.	[Y]
7	The 'Author contributions' passage describes the specific contribution(s) made by each author. The author's names are listed in the following format: full family (sur)name followed by abbreviated first and middles names. <i>e.g., "Wang CL and Liang L contributed equally to this work; Wang CL, Liang L, Fu JF, Zou CC, Hong F and Wu XM designed the research study; Wang CL, Zou CC, Hong F and Wu XM performed the research; Xue JZ and Lu JR contributed new reagents and analytic tools; Wang CL, Liang L and Fu JF analyzed the data; and Wang CL, Liang L and Fu JF wrote the manuscript. All authors have read and approve the final manuscript."</i>	[Y]
8	The 'Supported by' statement describes the source(s) of financial support and includes the corresponding identification number(s)	[Y]

	and program ID(s) if available, and contains no spelling errors.	
9	The 'Corresponding author' passage provides the corresponding author's full first and family (sur)names, abbreviated title (<i>e.g.</i> , MD, PhD), affiliated institute's name and complete postal address (including zip code) and e-mail (written in all lowercase), and contains no spelling errors.	[Y]
10	The Manuscript Tracking information (<i>i.e.</i> , Received, Peer review started, First decision, Revised, Accepted, Article in press, and Published online) are provided along with the corresponding editor and date for each item, and contain no spelling errors.	[Y]
11	The Abstract section is formatted according to the article-specific style (structured <i>vs</i> unstructured) and word count thresholds, as follows: <u>Commentary, Frontier, Diagnostic Advances, Medical Ethics, Minireview, Review, Therapeutics Advances, and Topic Highlight:</u> Non-structured abstract that is no less than 200 words. <u>Field of Vision, Case Report and Letter to the Editor:</u> Non-structured abstract that is no less than 150 words. <u>Research articles:</u> Structured abstract with subsections for AIM (no more than 20 words); METHODS (no less than 80 words); RESULTS (no less than 120 words); and CONCLUSION (no more than 26 words).	[Y]
12	The 'Key words' list provides 5-10 keywords that reflect the main content of the study. The first letter of each keyword is capitalized, and each keyword is separated by a semicolon.	[Y]
13	The "citation" contains authors' names and manuscript title. The name of the first author should be typed in bold letters; the family (sur) name of all authors should be typed with the first letter capitalized, followed by their abbreviated first and middle initials.	[Y]

	For example, an article by Jae Moon Yoon, Ki Young Son, Chun Sick Eom, Daniel Durrance, Sang Min Park will be written as Yoon JM, Son KY, Eom CS, Durrance D, Park SM. Pre-existing diabetes mellitus increases the risk of gastric cancer: A meta-analysis. <i>World J Gastroenterol</i> 2019; In press	
14	The 'Core tip' provides a summary (less than 100 words) of the study that outlines the most innovative and important arguments and core contents of the paper and will serve to effectively attract readers.	[Y]
15	The 'INTRODUCTION' section clearly describes the relevant background information for the study. Only the most relevant and current (within the past 5 years) literature is cited, with the exception of rare instances of seminal literature citations. All technical terms and/or abbreviations are explained and/or defined, with the full name of abbreviations given upon first appearance in the text and the abbreviation presented in parentheses [<i>i.e.</i> , "...computed tomography (CT)"]. First-person pronouns (<i>e.g.</i> , 'I', 'we') are used appropriately to clearly indicate the work performed by the author(s). When weaknesses of previous studies are described in the text to highlight the innovations related to the current study, the information is presented carefully.	[Y]
16	The 'MATERIALS AND METHODS' section clearly and accurately describes all materials and methods used to obtain the data presented in the article and is adequate for a reader to repeat the study.	[Y]
17	The 'RESULTS' section concisely describes the observational and experimental results. Representative data and data that have scientific significance are emphasized. Data is presented in either the text, a table or figure (<i>i.e.</i> , chart, diagram, graph or image), but is not repeated among each. Information presented in the tables and	[Y]

	figures clearly describes the trends, meaning, and inferences. Results described in textual form are accurate, concise and clear.	
18	Statistical symbols are accurate. Statistical significance is expressed as ^a $P < 0.05$, ^b $P < 0.01$ ($P > 0.05$ usually does not need to be denoted). If there are other series of P values, ^c $P < 0.05$ and ^d $P < 0.01$ are used, and a third series of P values is expressed as ^e $P < 0.05$ and ^f $P < 0.01$. Statistical data is expressed as mean \pm SD or mean \pm SE.	[Y]
19	The 'DISCUSSION' section (1) describes the main purpose and hypothesis of the study; (2) summarizes the most important results; (3) illustrates and explains the results (but does not simply repeat the data) and draws conclusions or inferences based on the results; (4) points out the limitations of the study and their impact on the results, as well as proposes further advice on future research topic(s) or direction(s); and (5) describes the theoretical significance and practical value of the findings.	[Y]
20	The 'ACKNOWLEDGEMENTS' section expresses gratitude to any individuals or organizations for technical support (<i>i.e.</i> , providing instrumentation, equipment or experimental materials, and/or assistance in experimental work), non-technical services (<i>i.e.</i> , useful inspiration, suggestions, guidance, or review), and/or any other auxiliary work.	[Y]
21	The 'ARTICLE HIGHLIGHTS' section provides comments for original articles in accordance with the specified format.	[Y]

22	<p>The 'REFERENCES' section lists the references in the Vancouver style. This style uses Arabic numeral in-text citations based on the order of the first appearance of a source in the text. For citations where the author's name is indicated in the text, a superscript number should be placed following the name (<i>i.e.</i>, "Pang <i>et al</i>"). For citations where no author is indicated, a superscript number should be placed at the end of the sentence. Respective examples are: "Ma^[1] reported", "Pan <i>et al</i>^[2-5] indicated" ; "PCR has a high sensitivity^[6,9]." No superscript numbers are used when the reference number is described in the text; for example, "The experimental method used has been described in reference [8]." The style of reference citations in tables is the same as that in the text (<i>e.g.</i>, Pan <i>et al</i>^[2-5], please see reference [8]).</p>	[Y]
23	<p>Journal references have been verified to ensure that there are no duplicate references and that the PMID numbers are correct. For references not yet included in PubMed: the name of Chinese journals is spelled out using Chinese Pinyin, with the first letter of each word capitalized (<i>e.g.</i>, <i>Shijie Huaren Xiaohua Zazhi</i>); the name of journals in other languages are listed according to indexing information retrieved from Google. Book references are presented with all the information relevant to the electronic version.</p>	[Y]
24	<p>The number of cited references is appropriate for the article type, as follows:</p> <p><u>Commentary</u>: no less than 50;</p> <p><u>Review</u>: no less than 100;</p> <p><u>Article</u>: no less than 30/26;</p> <p><u>Case Report and Letter to the Editor</u>: no less than 1.</p>	[Y]
25	<p>The ethics-related statements are provided in accordance with the manuscript type (<i>e.g.</i>, Manuscript No.-Institutional review board statement, Manuscript No.-Animal care and use statement, <i>etc.</i>).</p>	[Y]

26	The names of the peer reviewers and the scientific editor are present at the end of the paper (<i>e.g.</i> , P-Reviewer: Hugot D S-Editor: Wang JL).	[Y]
27	The order and numerical labeling of tables and figures is consistent with their appearance and presentation in the text. Symbols in tables (<i>e.g.</i> , +, -, ×, ÷, *) correctly correspond to the definitions in the footnotes. Only one legend is provided for each multi-panel figure consisting of color graphs, black and white graphs, or line graphs that depicts data of the same theme. For example: Figure 1 Pathological changes in atrophic gastritis tissue before and after treatment. A: ...; B: ...; C: ...; D: ...; E: ...; F:	[Y]
28	Split pictures include flow charts, line graphs, histograms, and graphs including text. Unsplit pictures include meta-analysis diagrams, PCR amplification curves, and survival curves.	[Y]
29	The author(s) highlighted the changes made to the manuscript according to the peer-reviewers' comments.	[Y]
30	The responses to the peer-reviewers' comments are consistent with the changes made to the manuscript.	[Y]
31	The revised manuscript is provided (file name: Manuscript No.-Review; <i>e.g.</i> , 870- Review). The letter of peer-reviewers' comments is provided (file name: Manuscript No.-Peer-review(s); <i>e.g.</i> , 870-Peer-review(s)). The response letter is provided (file name: Manuscript No.-Answering reviewers; <i>e.g.</i> , 870-Answering reviewers).	[Y]
32	The related ethics and relevant documents are provided, such as (1) Approved grant application form(s) or funding agency copy of any approval document(s) (file name: Manuscript No.-Grant application form(s)); (2) Biostatistics review certificate (file name: Manuscript No.-Biostatistics statement); (3) Conflict-of-interest statement (file name: Manuscript No.-Conflict-of-interest statement); (4) Clinical	[Y]

	trial registration statement (file name: Manuscript No.-Clinical trial registration statement); (5) Institutional review board approval form or document (file name: Manuscript No.-Institutional review board statement); (6) Institutional animal care and use committee approval form or document (file name: Manuscript No.-Institutional animal care and use committee statement), and (7) Signed informed consent form(s) or document(s) (file name: Manuscript No.-Informed consent statement).	
33	All authors signed the BPG Copyright license agreement form (file name: Manuscript No.-Copyright license agreement; e.g., 870-Copyright license agreement).	[Y]
34	The language certificate provided by authors who are non-native speakers of English meets the BPG requirements (file name: Manuscript No.-Language certificate; e.g., 870-Language certificate).	[Y]
35	The photos licensed in the Agreement for Use of Personal Photos are consistent with those in the paper (file name: Manuscript No.-Agreement for use of personal photos; e.g., 870-Agreement for use of personal photos).	[N]
36	This document (Checklist of Responsibilities for Scientific Editors) has been saved under the file name: manuscript No.-Scientific editor work list (e.g., 870-Scientific editor work list).	[Y]
37	A <i>CrossCheck</i> investigation (an effective tool for detecting unoriginal content, enabling our editors to preserve the journal's integrity and the authors' copyright) has been performed for the manuscript <i>via</i> the website: http://www.ithenticate.com/ . The results document contains the following information for the manuscript: "Name of journal", "Manuscript No.", "Columns", "Title" and "Author list". The Figure of the <i>CrossCheck</i> results is saved in JPEG format (.jpg) at 1440 × 680 pixel resolution. The PDF of the <i>CrossCheck</i> results has been saved under the file name: manuscript No.- CrossCheck report	[Y]

	(e.g., 870-CrossCheck report). The Google searches have also been performed to further ensure publication of original content.	
38	The text of the manuscript is typed in Book Antiqua font, 12 pt, with 1.5 line spacing.	[Y]
Responsibilities of scientific editors	The primary responsibilities of our scientific editors include carefully checking the entire manuscript and all accompanying materials for: (1) errors in spelling, grammar, punctuation and wording; (2) suitability of tables, figures, figure data and legends; (3) accurate and appropriate presentation of symbols (e.g. +, -, ×, ÷, %, *) in tables and figures; and (4) complete and comprehensive revision of the manuscript according to the reviewers' comments.	
Publication process	Manuscript reception and registration→Initial review by scientific editor→Peer review→End of peer review→First round of meeting evaluation→To be accepted→Revision by the author(s)→Second round of meeting evaluation→To be accepted/revised/rejected→Final review by the Editor-in-Chief (final quality control for academic content and language quality)→Final acceptance and charging of publication fee→Language editing→Production→Proofreading by scientific editor→Proofreading by deputy editor→Final review by Editor-in-Chief→Release of online open-access papers in electronic form on the BPG website→Release of online papers on PubMed Central→Delivery of high-quality PDF reprints to the author(s)→End of the publication process.
