	Editorial Office's Comments	
	Science Editor: 1 Scientific quality: The manuscript describes the	
	relationship of image analysis-based quantitative HBsAg expression	
	and its staining patterns with clinicopathological factors and	
	treatment in CHB. The topic is within the scope of the World	
	Journal of Hepatology. (1) Classification: One Grade B; (2)	
	Summary of the Peer-Review Report: This study elucidated the	
	relationship between p-HBsAg levels in liver and HBsAg levels,	
	HBV DNA levels in serum, and the treatment response in patients	
	receiving entecavir treatment. The questions raised by the reviewer	
	should be answered. (3) Format: There are 5 tables and 2 figures;	
2	but all tables are not included in the manuscript file. (4)	[V]
2	References: A total of 28 references are cited, including 2 references	[Y]
	published in the last 3 years; (5) Self-cited references: There are	
	none self-cited references. The self-referencing rate should be less	
	than 10%. Please keep the reasonable self-citations (i.e., those which	
	are most closely related to the topic of the manuscript) and remove	
	all other improper self-citations. If the authors fail to address the	
	critical issue of self-citation, the editing process of this manuscript	
	will be terminated; (6) References recommendations: 1) The	
	authors have the right to refuse to cite improper references	
	recommended by the peer reviewer(s), especially references	
	published by the peer reviewer(s) him/herself (themselves). If the	
	authors find the peer reviewer(s) request for the authors to cite

	improper references published by him/herself (themselves), please	
	send the peer reviewer's ID number to editorialoffice@wjgnet.com.	
	The Editorial Office will close and remove the peer reviewer from	
	the F6Publishing system immediately. 2 Language evaluation:	
	Classification: One Grade A. A language editing certificate issued	
	by AJE was provided. 3 Academic norms and rules: No academic	
	misconduct was found in the search. No academic misconduct was	
	found in the Google/Bing search. 4 Supplementary comments:	
	This is an invited manuscript. The study didn't receive any funding.	
	This study have no conflict of interest. The topic has not previously	
	been published in the World Journal of Hepatology. 5 Issues	
	raised: 1) All Tables need to be upload. 2) The authors did not	
	provide original pictures. Please provide the original figure files. 3)	
	The core tip is too long, and it should be no more than 100 words;	
	6 Recommendation: Conditional Acceptance.	
	Company Editor-in-Chief: I have reviewed the Peer-Review

	The 'INTRODUCTION' section clearly describes the relevant	
	background information for the study. Only the most relevant and	
	current (within the past 5 years) literature is cited, with the	
	exception of rare instances of seminal literature citations. All	
	technical terms and/or abbreviations are explained and/or defined,	
	with the full name of abbreviations given upon first appearance in	F 3/ 1
15	the text and the abbreviation presented in parentheses [i.e.,	[Y]
	"computed tomography (CT)"]. First-person pronouns (e.g., 'I',	
	'we') are used appropriately to clearly indicate the work performed	
	by the author(s). When weaknesses of previous studies are	
	described in the text to highlight the innovations related to the	
	current study, the information is presented carefully.	
	The 'MATERIALS AND METHODS' section clearly and accurately	
	describes all materials and methods used to obtain the data	[Y]
16	presented in the article and is adequate for a reader to repeat the	
	study.	
	The 'RESULTS' section concisely describes the observational and	
	experimental results. Representative data and data that have	
	scientific significance are emphasized. Data is presented in either	
17	the text, a table or figure (i.e., chart, diagram, graph or image), but is	[Y]
	not repeated among each. Information presented in the tables and	
	figures clearly describes the trends, meaning, and inferences.	
	Results described in textual form are accurate, concise and clear.	
	Statistical symbols are accurate. Statistical significance is expressed	
	as ${}^{a}P$ < 0.05, ${}^{b}P$ < 0.01 (P > 0.05 usually does not need to be denoted).	
18	If there are other series of P values, cP < 0.05 and dP < 0.01 are used,	[Y]
	and a third series of P values is expressed as $^{\rm e}P$ < 0.05 and $^{\rm f}P$ < 0.01.	
	Statistical data is expressed as mean \pm SD or mean \pm SE.

The 'DISCUSSION' section (1) describes the main purpose and hypothesis of the study; (2) summarizes the most important results; (3) illustrates and explains the results (but does not simply repeat the data) and draws conclusions or inferences based on the results; (4) points out the limitations of the study and their impact on the results, as well as proposes further advice on future research topic(s) or direction(s); and (5) describes the theoretical significance and practical value of the findings. The 'ACKNOWLEDGEMENTS' section expresses gratitude to any individuals or organizations for technical support (i.e., providing instrumentation, equipment or experimental materials, and/or assistance in experimental work), non-technical services (i.e., useful inspiration, suggestions, guidance, or review), and/or any other auxiliary work.
