Editorial Office's Comments

Science Editor: 1 Scientific quality: The manuscript describes a Retrospective Study of the Iliopsoas abscess management. The topic is within the scope of the WJO. (1) Classification: Grade B, C, C and D; (2) Summary of the Peer-Review Report: This study is well designed, executed and presented. Formatting and Grammer needs to be checked. Authors should give the rationale behind the treatment approach followed. The questions raised by the reviewers should be answered; (3) Format: There are 3 tables and 1 figure; (4) References: A total of 18 references are cited, including 2 references published in the last 3 years; (5) Self-cited references: There is no self-cited reference. 2 Language evaluation: Classification: Grade B, B, B and C. A language editing certificate issued by American Manuscript Editors was provided. 3 Academic norms and rules: The authors provided the Biostatistics Review Certificate, the Institutional Review Board Approval Form and Written informed consent. No academic misconduct was found in the Bing search. 4 Supplementary comments: This is an invited manuscript. No financial support was obtained for the study. The topic has not previously been published in the WJO. 5 Issues raised: (1) The authors did not provide original pictures. Please provide the original figure documents. Please prepare and arrange the figures using PowerPoint to ensure that all graphs or arrows or text portions can be reprocessed by the editor; (2) The "Article Highlights" section is missing. Please add the "Article Highlights"

section at the end of the main text; (3) Please upload the primary version (PDF) of the Informed Consent Form (Surgical procedures or other) that has been signed by the patients in the study, prepared in the official language of the authors' country to the system; for example, authors from China should upload the Chinese version of the document, authors from Italy should upload the Italian version of the document, authors from Germany should upload the Deutsch version of the document, and authors from the United States and the United Kingdom should upload the English version of the document, etc. Example: Download our sample of signed informed consent-Case report, https://www.wjgnet.com/bpg/GerInfo/287; (4) To obey the publication ethics and improve the protection of all patients' rights to privacy, the authors should provide the informed consent form on which the patient's name, address, birthday, address, ward, bed number, hospital number and other private information are obfuscated. 6 Recommendation: Conditional acceptance.

Company Editor-in-Chief: I have reviewed the Peer-Review Report, full text of the manuscript, and the relevant ethics documents, all of which have met the basic publishing requirements of the World Journal of Orthopedics, and the manuscript is conditionally accepted. I have sent the manuscript to the author(s) for its revision according to the Peer-Review Report, Editorial Office's comments and the Criteria for Manuscript Revision by Authors.

3	The fixed headings are copied.	[Y]
	The title concisely summarizes the main topic of the study and is	
	not too long (no more than 18 words). Words such as 'exploration',	
4	'research', 'analysis', 'observation', and 'investigation' are avoided.	[Y]
•	The title does not start with 'The' and does not include any Arabic	[+]
	numbers or uncommon abbreviations.	
5	A short running title is provided (no more than 6 words).	[Y]
	The authors' full family (sur)names and full/abbreviated first	[+]
6	names are listed on the title page and are consistent with those	[Y]
O	listed in the signed BPG Copyright License Agreement form.	[1]
_	The 'Author contributions' passage describes the specific	
	contribution(s) made by each author. The author's names are listed	
	in the following format: full family (sur)name followed by	
	abbreviated first and middles names.	
_	e.g., "Wang CL and Liang L contributed equally to this work; Wang	F247

The 'INTRODUCTION' section clearly describes the relevant background information for the study. Only the most relevant and current (within the past 5 years) literature is cited, with the exception of rare instances of seminal literature citations. All technical terms and/or abbreviations given upon first appearance in the text and the abbreviation presented in parentheses [i.e., "computed tomography (CT)"]. First-person pronouns (e.g., T, 'we') are used appropriately to clearly indicate the work performed by the author(s). When weaknesses of previous studies are described in the text to highlight the innovations related to the current study, the information is presented carefully. The 'MATERIALS AND METHODS' section clearly and accurately describes all materials and methods used to obtain the data presented in the article and is adequate for a reader to repeat the study. The 'RESULTS' section concisely describes the observational and experimental results. Representative data and data that have scientific significance are emphasized. Data is presented in either the text, a table or figure (i.e., chart, diagram, graph or image), but is not repeated among each. Information presented in the tables and figures clearly describes the trends, meaning, and inferences. Results described in textual form are accurate, concise and clear. Statistical symbols are accurate. Statistical significance is expressed as °P < 0.05, °P < 0.01 (P > 0.05 usually does not need to be denoted). If there are other series of P values, °P < 0.05 and °P < 0.01 are used, and a third series of P values is expressed as °P < 0.05 and °P < 0.01 are used, and a third series of P values is expressed as °P < 0.05 and °P < 0.01 are used, and a third series of P values is expressed as °P < 0.05 and °P < 0.01 are used, and a third series of P values is expressed as °P < 0.05 and °P < 0.01 are used.		and core contents of the paper and will serve to effectively attract

	The 'DISCUSSION' section (1) describes the main purpose and	
	hypothesis of the study; (2) summarizes the most important results;	
	(3) illustrates and explains the results (but does not simply repeat	
19	the data) and draws conclusions or inferences based on the results;	[V]
19	(4) points out the limitations of the study and their impact on the	[Y]
	results, as well as proposes further advice on future research	
	topic(s) or direction(s); and (5) describes the theoretical significance	
	and practical value of the findings.	
	The 'ACKNOWLEDGEMENTS' section expresses gratitude to any	
	individuals or organizations for technical support (i.e., providing	
20	instrumentation, equipment or experimental materials, and/or	
20	assistance in experimental work), non-technical services (i.e., useful	[N]
	inspiration, suggestions, guidance, or review), and/or any other	
	auxiliary work.	
24	The 'ARTICLE HIGHLIGHTS' section provides comments for	F2/7
21	original articles in accordance with the specified format.	[Y]
	The 'REFERENCES' section lists the references in the Vancouver	
	style. This style uses Arabic numeral in-text citations based on the	
	order of the first appearance of a source in the text. For citations	
	where the author's name is indicated in the text, a superscript	
	number should be placed following the name (i.e, "Pang et al"). For	
	citations where no author is indicated, a superscript number should	
22	be placed at the end of the sentence. Respective examples are: "Ma[1]	[Y]
	reported", "Pan et al ^[2-5] indicated"; "PCR has a high	
	sensitivity[6,9]." No superscript numbers are used when the	
	reference number is described in the text; for example, "The	
	experimental method used has been described in reference [8]." The	
	style of reference citations in tables is the same as that in the text	
	(e.g., Pan et $al^{[2-5]}$, please see reference [8]).
