SPECIFIC COMMENTS TO AUTHORS

This is a Letter to the Editor regarding the work by Fu et al., previously published in the World Journal of Diabetes. It is a concise and augmentative reflection on the paper by Fu, which emphasises the major messages and critically reflects potential biases. I would recommend it for publication.

SPECIFIC COMMENTS TO AUTHORS

Comments: New glucose-lowering agents reduce liver enzyme levels and BP. Whether this finding can be extended to NAFLD patients, in whom a bidirectional association of NAFLD measures and BP has been also demonstrated, remains by and large unknown. . It is a letter of interest My detailed comments are as follows: 1.The analysis of the letter is resonable, 2.The language is fluent 3..The conclusion is confident. 4.The references are almost new I suggest that the letter may be considered for publication.
