Introduction Case Report Discussion Conclusion References

Hypokalemic paralysis is a rare cause of muscle weakness and cardiac arrhythmias that primarily affects male patients of Asian descent. Because it is rare in non-Asians¹ it can be misdiagnosed. **Thyrotoxic periodic paralysis (TPP)** is caused by a sudden shift of potassium into cells, leading to hypokalemia and muscle weakness and can lead to near-fatal or fatal arrhythmias. Immediate therapy with potassium chloride supplementation may foster a rapid recovery from weakness and prevent arrhythmias but risk...

Sliding with the sines: A case report of fatal hyperkalemia

Kyaw Khaing Soe, Arnold Hoo Seto

Abstract
BACKGROUND
Classic electrocardiographic manifestations of hyperkalemia starting with peaked symmetrical T-waves are widely recognized in daily clinical practice but little evidence is documented how quickly it can evolve in real-time.

<https://www.semanticscholar.org/paper/A-Case...>

Here, we report a case of massive cerebral venous sinus thrombosis (CVST) with intracerebral hemorrhage in a young woman in her first trimester pregnancy, with underlying antithrombin III deficiency that leads to a fatal maternal outcome. Antithrombin III deficiency is a rare hereditary thrombophilia. It is associated with 2-4 fold higher risks ...
