Manuscript Type : Original Article

Title : Surgical Perspectives of Symptomatic Omphalomesenteric Duct Remnants: Differences between Infancy and Beyond

This is a result of retrospective study. Therefore, it was impossible to get consent from patients and their guardians in advance. This study was not for research purpose about human subject itself, so it does not contain any concerned data. It may be published as a journal worthy of being open in public after collecting data of treatments and operations for the past 12 years. Moreover, the Pusan National University Yangsan Hospital Institutional Review Board also approved to progress this project without informed consent (IRB No. L-05-2020-111).

Sincerely,

Yong-Hoon Cho, M.D.

A handwritten signature in black ink, consisting of a large, stylized 'C' shape with a horizontal line through it, and a small 'H' at the end.
