## PEER-REVIEW REPORT

Name of journal: World Journal of Clinical Cases

Manuscript NO: 70044

Title: Effects of Minimally Invasive Surgery versus Laparotomy in Patients with Colon

Cancer Residing in High-altitude Areas

Reviewer's code: 06110579

**Position:** Peer Reviewer

Academic degree: MD

Professional title: Doctor

Reviewer's Country/Territory: Sweden

Author's Country/Territory: China

Manuscript submission date: 2021-08-12

Reviewer chosen by: AI Technique

Reviewer accepted review: 2021-08-15 16:41

Reviewer performed review: 2021-08-28 23:02

Review time: 13 Days and 6 Hours

Scientific quality	[ ] Grade A: Excellent [ ] Grade B: Very good [Y] Grade C: Good [ ] Grade D: Fair [ ] Grade E: Do not publish

## SPECIFIC COMMENTS TO AUTHORS

In recent years, due to the increasing incidence of colon cancer, the safe and effective treatment have become a research hotspot. Surgery is an important measure in the current clinical treatment of colon cancer, and laparotomy and laparoscopic minimally invasive surgery are commonly used. With improvements in minimally invasive technology and the popularization of this concept, laparoscopic surgery has been applied as an important clinical minimally invasive surgery in colon cancer. Laparoscopic surgery can reduce surgical trauma and shorten recovery time, which play an important role in the treatment. In this study, the authors examined the effect of minimally invasive surgery and laparotomy in patients with colon cancer residing in high-altitude areas. The reviewer thinks that the study is very interesting. Comments: 1. The results section in the abstract is too long. Authors should only keep some most important data, and short this paragraph. 2. Some minor language polishing should be revised. 3. Please check and edit the tables.
