

PEER-REVIEW REPORT

Name of journal: *World Journal of Clinical Cases*

Manuscript NO: 70089

Title: Combination therapy (toripalimab and lenvatinib)-associated toxic epidermal necrolysis (TEN) in a patient with metastatic liver cancer: A case report

Provenance and peer review: Unsolicited manuscript; Externally peer reviewed

Peer-review model: Single blind

Reviewer's code: 05146264

Position: Associate Editor

Academic degree: MBBS, MD

Professional title: Assistant Professor, Research Assistant Professor

Reviewer's Country/Territory: India

Author's Country/Territory: China

SPECIFIC COMMENTS TO AUTHORS

The article entitled as “Combination therapy (toripalimab and lenvatinib)-associated toxic epidermal necrolysis (TEN) in a patient with metastatic liver cancer : A case report” by Huang KK et al. describe TEN following combination therapy with a PD-1 inhibitor and lenvatinib. The topic looks very interesting . I have a few concerns 1. Please mention the rationale for choosing the therapy as the usual therapy is Sorafenib 2. Is the same side effect reported in any cancer condition 3. have the patient look into only person. 4. Ethical clearance no is needed as suggested by the journal 5. I have found some technical errors with the file eg: some words are combined without any separation.may be it is software issue. Please correct it.
