Editorial Board  
World Journal of Gastroenterology

Dear Editor:

I have reviewed the statistical methods used in the study titled “Evaluating the regulation of cell membrane transporter proteins (OATP1A4 and OATP4C1) and P-glycoprotein (MDR1) in liver, kidney, and intestine in rats with obstructive cholestasis and its implication for digoxin clearance” led by Dr. Hua Liu. The analysis methods used are sound and the reporting of the results is correct.

Please contact me by phone at 601-815-9780 or email at [lzhang2@umc.edu](mailto:lzhang2@umc.edu) if have questions.

Sincerely,

*Lei Zhang*
