#### **SPECIFIC COMMENTS TO AUTHORS**

The fetus in fetu is a rare congenital anomaly. The most common site of parasitism is the retroperitoneum of the normally developing fetus. However, it can be detected even in the sacral and gonadal regions, and within the skull. The study reported a rare case of a male infant aged 26 days presenting with retroperitoneal parasitic fetus. The case is well described and well discussed. The reviewer suggests to accept this case report after a minor editing. Thank you.

#### **SPECIFIC COMMENTS TO AUTHORS**

In this case report, the authors reported a rare case of retroperitoneal parasitic fetus. The authors described the case in detail. Also, the case was discussed with recent references. Only the quality of the images should be improved, I have no special comments.
