Manuscript NO.: 71068

Column: Opinion Review

Title: The gut-brain axis: focus on gut metabolites SCFAs

Reviewer 1:

Comment: Paper topic is well conceived and organized. Paper is well written, with minor english language editing needed. It would be interesting to have a final section with future perspectives regarding the modulation of the microbiota in the treatment of these diseases.

Response: We thank and agree with the reviewer. We have added the section with future perspectives regarding the modulation of the microbiota in the treatment of these diseases in the revised manuscript. We added the underline to the modified place and marked it with red.

Reviewer 2:

Comment: Interesting information was included.

Response: We thank the Reviewer for the recognition of our work.
