SPECIFIC COMMENTS TO AUTHORS

The Authors reported an interesting case of Pulmonary lymphomatoid granulomatosis (PLG) caused by a mutation in the macrophage-expressed gene 1 (MPEG1), suggesting the possibility of PLG occurrence in children undergoing treatment for pulmonary nodular lesions. In general, the manuscript is well written. Please revise the English language and flow, and check throughout the text for spelling errors. The Figures are detailed and helpful for the reader. I would suggest to add more recent literature (papers published in the last three years).

SPECIFIC COMMENTS TO AUTHORS

Interesting manuscript depicting a case of pulmonary lymphomatoid granulomatosis in a 4-year-old girl. The paper is well-written and overall well-presented. Some minor suggestions for revision: 1. Detail the follow-up period - which chemotherapy regimen was she prescribed? 2. Please check that all paragraphs have references - please check the Discussion section in particular. 3. The quality of the Figures is bad. Try to improve them, please. The case is well-presented but the figures are very, very bad.
