

Dear Editor,

Please find enclosed the edited manuscript in Word format (file name: 7145-review.doc).

**Title:** Colonic polyps: is it useful to characterize them with advanced endoscopy?

**Author:** Lopez-Ceron M, Sanabria E, Pellise M.

**Name of Journal:** *World Journal of Gastroenterology*

**ESPS Manuscript NO:** 7145

The manuscript has been improved according to the suggestions of reviewers:

**1** Format has been updated.

The language has been polished and typing mistakes have been corrected. Our manuscript has reached grade A in language evaluation (priority publishing). This has been certified the language editing company AmEditor, which has written a recommendation letter.

**2** Revision has been made according to the suggestions of the reviewers:

(1) We have elaborated on the legal impact of discarding polyps in page 7.

(2) The usefulness of differentiation of neoplastic versus non-neoplastic lesions and its relationship with serrated lesions has been explained in page 5. So has the use of chromoendoscopy and NBI to differentiate sessile serrated adenomas from hyperplastic polyps, in page 5 and 6 respectively. There are no studies directly addressed to establish the use of high definition endoscopy for this purpose.

**3** The quality of the figures has been improved. Some figures have been eliminated because they did not reach resolution requirements.

4 References and typesetting were corrected.

Thank you again for publishing our manuscript in the *World Journal of Gastroenterology*.

Sincerely yours,

A handwritten signature in cursive script, reading "Maria Pellise", written in dark ink on a light background.

**Maria Pellise, MD, PhD**
