### **SPECIFIC COMMENTS TO AUTHORS**

The article titled "Gallbladder Burkitt's lymphoma mimicking gallbladder cancer: A case report" reported a rare case about Burkitt's lymphoma happened in gallbladder. The patient got complications and had fast recurrence after bile duct resection with gallbladder bed resection and periportal lymph node dissection. This case distinguished the difference between Burkitt's lymphoma and gallbladder carcinoma in diagnosis, which is helpful for clinical doctor to recognize this disease and avoid further extensional resection. The case is high quality and has finished language revised. I suggested this article can be accepted in World Journal of Gastroenterology.

### **SPECIFIC COMMENTS TO AUTHORS**

Abstract "An 83-year-old man with no complaints had a gallbladder tumor"-how was tumor diagnosed? "Biopsy is recommended in cases with suggestive findings of gallbladder malignant lymphoma"-There are hardly any features suggestive of gallbladder lymphoma-please modify the conclusion. Introduction Please write "gall bladder" as "gallbladder" In almost all cases of this malignancy, patients are diagnosed as having gallbladder adenocarcinoma or cholecystitis at the time of surgery, and preoperative diagnosis is extremely difficult-Please cite a recent paper published in World J Gastroenterol PMID: 33177791 Case presentation Better to write as "no abdominal complaints" rather than "no complaints" Please replace "enhanced" with "contrast enhanced" "A contrast-enhanced abdominal CT scan revealed two irregular and highly enhanced masses at the neck and body of the gallbladder as well as periportal lymph node enlargement, measuring 30 × 20 mm in diameter and consistent with gallbladder cancer metastasis"-This is not correct as GB metastasis is very rare and there are no characteristic findings. Discussion "Furthermore, in this case, a discrepancy existed in that no serosal invasion was observed despite the size of the tumor and presence of lymphadenopathy. This might be a characteristic finding that distinguishes gallbladder malignant lymphoma from carcinoma"-Please give reference for this Legends: Figure 1: The authors state that the findings of CT are consistent with metastases. This is not correct as GB metastasis is very rare and there are no characteristic findings.
