SPECIFIC COMMENTS TO AUTHORS

Many congratulations and thanks for the entire team to come up with such a rare case. Please go through few suggestions and make necessary corrections. Abstract- Conclusion: It is better to mention some other word rather than “ First reported case” as there is possibility that such cases had been published earlier but we could not find such as gray literatures which we may not be easy access. It is better to arrange the keywords alphabetically. Physical examination: it is better to quantify the motor power as per standard motor power grading system. Was there any signs of meningeal irritation or papilledema? Please mention important negative findings too. Management: please mention the duration of therapy (including for first high dose methotrexate and cytarabine). Rather than mentioning “several courses of intrathecal chemotherapy” it is better to mention the number of cycles she actually received. Follow up: please mention the last date of follow up .Provide year and month for information of her survival rather then mentioning that she is alive till date. She may not be alive when the paper is published. Reference: Ref. 15 has year of publication just after author name and rest of the other references have other formats. Please have the same format as led down by the publisher. Please make sure that table/figures are cross-referenced in the text too. Also, make proper placement of table caption(caption above the table)

SPECIFIC COMMENTS TO AUTHORS

A concise, comprehensive, easy to read and well structured case report. There are no grammatical or spelling errors throughout the text. I think this paper is welcome and relevant for medical daily practice. Thank you.
