

Dear Editor,

Thank you very much for your help and support. I have revised the manuscript according to the reviewers comments. The revised feedback is as follows:

Reviewer #1: None

Reviewer #2: #1 I have add the comments on the fact that echocardiography showed only diastolic dysfunction and no systolic dysfunction in the acute phase in the Discussion Part. #2 Such a case also included in NSTEMI, I have explained the reason in the Discussion Part. #3 Pericarditis was complicated by AMI, I have corrected it. #4 The bilateral pleural effusions seem to be a symptom of heart failure as well as pneumonia. Because there is no pericardial effusion, there is no treatment for pericardial effusion. #5 I have omitted the normal range from the next time. I have added CRP, NT proBNP, and myocardial injury enzymes in the table .#6 I have revised the conclusion part according to the comments.

Reviewer #3: 1. Intestinal obstruction has been removed from the title. 2. I deleted some content to make the article simpler than before. 3. In the treatment part, the interrogative form has been revised.

I have submitted the article to an English editor for language polishing, but it hasn't been revised yet.

To Science editor: I have simplified some content and integrated some pictures within 8.

To Company editor-in-chief: 1. Uniform presentation are used for figures showing the same or similar contents. 2.The title of the manuscript has been shortened. 3. The original figure documents have been provided.

Best Regards,

Thank you very much.
