SPECIFIC COMMENTS TO AUTHORS

Schwannomatosis is a rare but well-described syndrome characterized by multiple peripheral nerve schwannomas usually without involvement of the vestibular nerve and can be sporadic or familial in nature. The authors provided an excellent presentation of the schwannomatosis patient, which allows me to recommend the manuscript for publication in the World Journal of Clinical Cases. I'm only advising authors to revise the "CONCLUSION" section.

The authors in their study reported a rare case of NF type 3 with long term follow up: their diagnosis is confirmed and their message was obvious to the readers . They also reported patient family members with same pathology I recommend them to followed them carefully with psychological support from pschatry consultants to avoid the poor outcome of their patient who gave up his close follow up and surgeries although , the patology of his tumors is a benign and can bee treated surgically with smooth post operative course I recommend to add a review of literatures for previously published cases It will add to the strength of their article.

SPECIFIC COMMENTS TO AUTHORS

The present case study reported a schwannomatosis patient who was followed up for fifteen years. The topic is interesting and the manuscript although well-written, the authors failed to show the novelty in their work. Please clarify the innovation in your case presentation. When I search “schwannomatosis” in PubMed, there comes out to be more than 400 search results. I recommend the authors to collate all the related cases reported in the literature and list a table to demonstrate the rarity of schwannomatosis.
