SPECIFIC COMMENTS TO AUTHORS

Dear Authors, Congratulations for conducting this study entitled "Comments on "Review of the role of diagnostic modalities and imaging findings in the COVID-19 pandemic"" for possible publication in the esteemed journal "World Journal of Radiology". The manuscript describes the essential role of various radiological tools used in the assessment of COVID-19 patients, particularly in identifying the early signs of severe infection. I have only 3 comments: 1. Please add the full term of the abbreviations "RNA" and "CXR". 2. Please remove the word infection from this sentence " Radiological assessment of lung edema (RALE) (Table-1) and Brixia score (Table-2) are the CXR-based grading systems in practice to predict the severity and prognosis of COVID-19 infection." Because COVID-19 referred to the disease while SARS-CoV-2 is causative virus of the disease. 3. Add a space between \geq and 1 and between $>$ and 75% in Table 1. Please take care of similar changes are required in Table 4.

SPECIFIC COMMENTS TO AUTHORS

1. Please recheck the preposition mentioned and add vowels in the title of this article.
2. Please mention at least one advantage of LUS over CT or CXR the author Pal A et al. did not mention in his/her article so it is better to add a sentence on its advantage in this manuscript.
3. Kindly discuss in short how to overcome the limitations of RT-PCR test results because all the other confirmatory radiological testing is invalid unless the RT-PCR test is positive for a patient and based on it antiviral drugs can be administered.
