### **SPECIFIC COMMENTS TO AUTHORS**

Excellent research. I am one of the pediatric surgeons who have performed ERAS about three years ago. I got excellent results in pediatric patients' pre, during, and postoperative outcomes. In addition, the length of hospitalization and hospitalization costs can be lower than without ERAS. 1. Add the word ERAS in the KEYWORDS section 2. Make a short and clear introduction that describes why the author wants to do this research. Please move some sentences/references to the discussion. 3. Please explain why the author chose the sample size for each group of 150 patients! Is there a previous sample calculation using the formula?

### **SPECIFIC COMMENTS TO AUTHORS**

This manuscript is a prospective study about Enhanced Recovery After Surgery' strategy to shorten perioperative fasting in children undergoing non-gastrointestinal surgery >3 months of age. The title and the abstract are complete and informative. The materials and methods section is well described and is reproducible. The aim of the study is clear. The discussion is well presented and informative. English quality is high. The main limitation of this study is that the content is not original and other papers are present in the literature about the topic. However, credits must be given to the precise, complete, and English quality of the manuscript.
