SPECIFIC COMMENTS TO AUTHORS

I agree with the statment, that the diagnosis of acute appendicitis not require CT imaging for all patients. Alternatives despite the CT are clinical scores and laboratory values.

SPECIFIC COMMENTS TO AUTHORS

1. Abstract: CT: provide the expanded name for the first time. Periappendix abscess: incorrect. The correct is "periappendiceal". 2. Revise for language and grammar errors. E.g. "most commonly used method" the correct is "methods", "Portal vein can be effected" the more appropriate is "affected", A male patient aged 87, "A 87-year-old male",.... 3. Figure 1: use of black colored circle and arrow on the figure is inappropriate, please use a different color. 4. Unify the use of terms: as periappendicular, periappeniceal,.. 5. The quality of both figures needs to be improved.
